Infant milk formula "FAJOLAC Opti Formula" 2,
Infant milk formula "FAJOLAC Opti Formula" 3**

The birth of a baby is not only a joy, but also a great responsibility. And the mother's main task during this period is to provide the baby with the necessary vitamins and microelements. If, for some reason, breastfeeding is not possible, it becomes necessary to use infant dry milk formulas that are as close as possible to human breast milk and that fully meet all the baby's nutritional and energy needs, activate the baby's immune system and ensure comfortable digestion. Such formulas are FAJOLAC Opti Formula, which, in addition to vitamins, minerals, prebiotics and nucleotides useful for the baby's body, contain polyunsaturated fatty acids: docosahexaenoic acid (DHA) and arachidonic acid (ARA) and probiotics (bifidobacteria).

Omega-3 and Omega-6 fatty acids can reduce the risk of cardiovascular disease in a child. These fatty acids are also important for the development of the baby's brain, nervous system and vision and are necessary for the development of cognitive functions that affect the ability to think and learn.

The human body can not synthesise polyunsaturated essential fatty acids (Omega-3 and Omega-6). They can only be obtained from food.

Probiotics are micro-organisms that have health benefits when taken in the recommended amounts. Maintaining the right level of probiotics in the baby's body helps to strengthen the baby's immune system, improve metabolism and digestive tract function, ensure better health, calmness, proper daytime sleep and healthy skin.

The combination of the optimal amount of prebiotics and probiotics in infant milk formula "FAJOLAC Opti Formula" ensures the formation and maturation of the proper functioning of the baby's gastrointestinal tract during the first year of life and supports it in the future.

Infant milk formula "FAJOLAC Opti Formula" for babies from birth to 6 months (primary) with nucleotides, prebiotics and probiotics (bifidobacteria). 800 g / 400 g

Infant milk formula "FAJOLAC Opti Formula" for babies from 6 to 12 months (further nutrition) with nucleotides, prebiotics and probiotics (bifidobacteria). 800 g / 400 g

Infant milk formula "FAJOLAC Opti Formula" for babies from 12 months (complementary foods) with prebiotics and probiotics (bifidobacteria). 800 g / 400 g

FAJOLAC PREMIUM

**Infant milk formula with prebiotics and nucleotides
FAJOLAC PREMIUM 1, FAJOLAC PREMIUM 2, Infant
milk formula with prebiotics FAJOLAC PREMIUM 3,
FAJOLAC PREMIUM 4**

Breast milk is, and always has been, the best form of nutrition. Its role in ensuring the baby's life and health depends largely on its unique composition, from which the tiny body receives nutrients and builds the foundation for the future. However, in case of its deficiency or on the individual doctor's recommendation, FAJOLAC PREMIUM 1 (for babies from birth to 6 months) and FAJOLAC PREMIUM 2 (for babies from 6 to 12 months) infant milk formulas with prebiotics and nucleotides will help. And when the baby grows a little, we recommend using FAJOLAC PREMIUM 3 (for babies from 12 months) and FAJOLAC PREMIUM 4 (for babies from 18 months) infant milk formulas, which supplement the baby's diet with nutrients, vitamins and minerals necessary for active growth.

Eco Balance is:

- Selected high quality cow's milk from farms, tested and dried at our own production facilities;
- Vitamins (A, D, E, K, C, Thiamine, Riboflavin, Niacin, B₆, Folic acid, B₁₂, Biotin, Pantothenic acid)
- Minerals (Potassium, Calcium, Magnesium, Iron, Zinc, Iodine, Sodium, etc.)
- No palm oil, added sugar, GMOs, preservatives, flavourings or colourings

Prebiotics and nucleotides:

Adding these ingredients to the formula makes it as close as possible to breast milk for better absorption and digestion by the baby's small body.

Nucleotides stimulate the maturation of the intestinal epithelium, promoting the growth of beneficial bifidobacteria in the gut and supporting the microflora. They help normalise liver cell function, increase antibody production and have a beneficial effect on the baby's immune system.

Prebiotics normalise the microflora and act as food for the beneficial bacteria, promoting their reproduction for further beneficial effects in the baby's gut.

FAJOLAC PREMIUM 1

Infant milk formula with prebiotics and nucleotides for babies from birth to 6 months (primary) 400 g

FAJOLAC

Infant milk formula

Breastfeeding is undoubtedly the best way to feed a baby, but sometimes it is necessary to use mixed or formula foods. In this case, you should seek the advice of a pediatrician who will help you choose the right formula. The specialists of Khorol Infant Nutrition Factory LLC have developed a whole line of FAJOLAC formulas for their little consumers.

For more than 50 years, this special line has been helping thousands of mothers and fathers to bring up their children in a healthy way and to meet their nutritional needs.

FEATURES:

- ① Selected high quality cow's milk from farms, tested and dried at our own production facilities;
- ② Vitamins (A, D, E, K, C, Thiamine, Riboflavin, Niacin, B₆, Folic acid, B₁₂, Biotin, Pantothenic acid)
- ③ Minerals (Potassium, Calcium, Magnesium, Iron, Zinc, Iodine, Sodium, etc.)
- ④ No palm oil, added sugar, GMOs, preservatives, flavourings or colourings

*** if necessary, may be combined with FAJOLAC PREMIUM (p.5) and FAJOLAC (p.6-7) milk and cereal based infant foods. Preliminary consultation with a pediatrician is mandatory.*

FAJOLAC 3 Complementary foods

Infant milk formula for babies from 12 months. 400 g

** Breastfeeding is an absolute advantage. Consult a pediatrician before feeding a baby under 1 year old.*

FAJOLAC PREMIUM

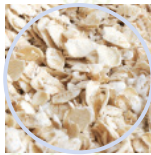

Milk and cereal based infant formula with prebiotics (complementary foods)

During the first six months of a baby's life, breast milk or milk formula remain the main part of the diet, but it needs to be gradually increased.

The FAJOLAC PREMIUM line of prebiotic baby foods also includes milk and cereal based complementary foods for babies from 4 months. The addition of buckwheat, rice and oat flour to the product allows not only to diversify the usual menu, but also to choose a complementary food tailored to the baby's specific needs.

Rice grits is hypoallergenic, which is why it is often used in the diet of babies with atopic dermatitis; it also regulates intestinal function, which is why it is particularly recommended in cases of unstable bowel movements and diarrhoea.

Oat groats increases intestinal motility and promotes better bile evacuation, has an enveloping effect on the mucous membrane and regulates intestinal motor processes. It can therefore be used for gastrointestinal disorders and constipation.

Buckwheat groats due to its high iron content, it can be used as a preventative measure and as part of a diet for anaemia and gastrointestinal disorders.

FAJOLAC

Milk and cereal based infant formula (complementary foods)

If your baby is not getting enough breast milk or milk formula, is not gaining enough weight and is sleeping poorly, you should consider FAJOLAC cereal-based complementary foods, which are designed to address these issues.

The range includes seven products for babies aged 4 and 6 months: buckwheat, rice, oatmeal, corn, oat-buckwheat, oatmeal-rice and a combination of rice, corn, oatmeal and buckwheat. Our FAJOLAC baby food goes well with Happylon, FAJOLAC PREMIUM and breast milk. It is suitable for regular feeding of healthy babies, but breast milk or milk formula remains the main food.

FEATURES:

- Selected high quality cow's milk from farms, tested and dried at our own production facilities;
- Cereals in the formula provide an extra source of energy to keep your baby satisfied for longer;
- Enriched with vitamins: Biotin, A, D, E, K, C, PP, B₁, B₂, B₃, B₆, B₁₂;
- Contains important trace elements: iodine and iron, which help to strengthen the immune system and prevent iodine deficiency and anaemia;
- Free from GMOs, palm oil, preservatives, flavourings, colourings and other harmful substances.

FAJO

Instant cereal for infant and diet food

The introduction of complementary foods is a special occasion for both baby and parents. To celebrate this event with you, we have developed FAJO milk cereals. A wide range of flavours will help to introduce the first foods and diversify the further nutrition.

The milk cereal recipes are designed for children aged 4 and 5 months and come in five flavours: rice, buckwheat, corn, cereal mix and buckwheat-rice. All FAJO products are rich in protein, calcium, iron, a complex of vitamins, have a delicate texture and are easy to digest.

FEATURES

- ① Selected high quality cow's milk from farms, tested and dried at our own production facilities;
- ② Carefully selected cereals, with strict control at all stages of production;
- ③ Additional enrichment with iron and vitamins: Biotin, A, D, E, K, C, PP, B1, B2, B5, B6, BC, B12;
- ④ Free from GMOs, palm oil, preservatives, flavours, colourings and other harmful substances.
